

# Canada's Productivity Slowdown: A Sectoral Analysis

Steven Chung

University of Toronto

March 31, 2025

# Motivation

- Since 2015, Canada's Real GDP per capita growth has slowed noticeably.
- Main Reason: Slowdown in Productivity Growth
- Slowdown Starts in 2000, but exacerbated in recent years

# Real GDP per Capita (1997–2023)

# Methodology

- Data:
- Labour Productivity and Hours Worked by Sectors
- Source: Statistics Canada – 1997-2023
- Shift-Share Decomposition Framework
  - Within-sector: Productivity change within sectors
  - Between-sector: Labour shifts across sectors
- Ref: Huan, CSLS (2023), Duarte & Restuccia (2010)

# Model: Decomposing Productivity

- $Y = A \cdot N$
- For Sector  $i$
- $Y_i = A_i \cdot N_i$  ;  $\frac{\sum_i Y_i}{N} = \frac{Y}{N} = A$
- $A = \sum_i (A_i \times N_i / N)$
- Huan (2023):

$$\Delta A = \underbrace{\sum_i s_i \Delta A_i}_{\text{Within-sector}} + \underbrace{\sum_i A_i \Delta s_i}_{\text{Between-sector}}$$

- where  $s_i = N_i / N$

# Productivity Trends by Sector (Levels)

- Goods v.s. Services
- Recent Decline by All Sectors

# Growth Rates by Sector (YoY % Change)

- No Significant Divergence among Sectors

Sources: Statistics Canada

# Shift-Share Decomposition: All Sectors

- Within-sector growth explains most changes.
- Labour reallocation had modest effects.

Unit: Chained 2017 \$ per hr

$\Delta A$

# Labour Reallocation Across Sectors

- Counterfactual A: 63.90 (2023)
- Real A: 63.5 (2023), less than 1% differences.

# Goods Sector

- Manufacturing shows flat or falling productivity.
- Resource sectors (e.g. mining) had mixed trends.

Sources: Statistics Canada

# Shift-Share: Goods Sector

- With-in contributed most of the growth/ Slowdown

Sources: Statistics Canada  
 $\Delta A$  Unit: Chained 2017 \$ per hr

# Service Sector Breakdown

- Some subsectors stagnant (e.g. admin, food services).
- Overall service productivity improved slowly.

Sources: Statistics Canada  
Selected subsectors shown for clarity

# Shift-Share: Services Sector

- Recent reallocation trends reduce overall productivity

Sources: Statistics Canada  
 $\Delta A$  Unit: Chained 2017 \$ per hr

# Conclusion

- Canada's productivity slowdown is broad-based.
- Sector stagnation matters more than structural shifts.
- Focus on reviving within-sector productivity.
- What causing low within-sector productivity?
